

Artem Shishkin

Tech Support Engineer (L2/L3) — AI Automation & Infrastructure

[LinkedIn](#) | [Telegram](#) | ashishkin21@gmail.com | Israel, Center District

SUMMARY

Tech Support Engineer (L2/L3) with 8 years of hands-on experience — served as the bridge between users and engineering across frontline triage, incident management, and support automation. Built support systems handling 2000+ tasks/day with 15% auto-resolution rate, managed production incidents for 40+ microservices at 99.9% uptime SLA, and drove root cause analysis through log forensics and metric correlation. Keen interest in AI infrastructure and decentralized compute — looking to build a support function from scratch in a startup environment.

SKILLS

Support & Incident Management: L2/L3 Support, Triage, Root Cause Analysis, Bug Reproduction, Incident Response, On-Call, Postmortem, Runbooks, SLA Management, Technical Documentation

Infrastructure & Monitoring: Linux, Network Diagnostics, Docker, Kubernetes, Grafana, Graylog, Splunk, Kibana, Log Analysis, HashiCorp Vault, GitLab CI, CI/CD

Automation & AI: Python, FastAPI, N8N, LangChain, LangGraph, RAG, Prompt Engineering, LLM/AI Inference, REST API, asyncio

Data: PostgreSQL, Oracle, SQL, Redis

Security: OAuth 2.0, Keycloak

Methodology: Agile, Scrum, SAgile, Kanban

Tools: Git, JIRA, Confluence, Service Desk

EXPERIENCE

Automation Engineer — Home Credit International

Remote | December 2023 - Present

Home Credit International — global consumer finance provider with 100M+ customers across 9 countries

- Designed and deployed 5+ internal tools automating support workflows — eliminated 200+ hours/month of manual triage and resolution work across 10+ teams
- Built no-code support AI platform handling 2000+ tasks/day: automated ticket triage, LLM-powered routing, and dynamic resolution via Service Desk webhooks; won **"Best IT Project of 2025"**
- Developed RAG-based auto-resolution system that triages incoming tickets, searches vectorized knowledge bases and Graylog logs, and auto-resolves ~15% of tickets — saves **200+ engineering hours/month**
- Created release validation tool: automated pre-deployment checks, test coverage verification, and step-by-step release plans with rollback instructions — reduced release prep from **20 min to 2 min**
- Built support analytics dashboard with real-time ticket aggregation, CSV exports, and LLM-powered improvement recommendations; auto-delivers reports to stakeholders
- Containerized all services with Docker, deployed via GitLab CI/CD pipelines to VMs and Kubernetes, managed secrets with HashiCorp Vault
- Implemented Grafana dashboards, metrics, and alerts; integrated OAuth 2.0 authentication via Keycloak for all services

Site Reliability Engineer — Home Credit International

On-site | Moscow, Russia | June 2019 - November 2023

- Maintained 99.9% uptime SLA for high-load banking platform (40+ microservices) in Kubernetes — served as L3 escalation point and incident responder for production and test environments
- Performed root cause analysis through log forensics (Splunk, Graylog, Kibana), SQL queries (Oracle, PostgreSQL), and metric correlation (Grafana) to resolve production incidents
- Built proactive monitoring dashboards and alerts in Grafana, Splunk, Graylog, and Kibana — reduced mean time to detection and prevented incidents before user impact
- Conducted postmortems, maintained runbooks, and participated in on-call rotation for incident response
- Managed microservice configurations, Helm values, Vault secrets, and network access rules for 40+ services
- Automated deployment workflows via GitLab Pipelines and Jenkins, reducing deployment time and manual errors

Technical Support Engineer — Tinkoff Bank

On-site | Moscow, Russia | June 2017 - May 2019

Tinkoff Bank — one of the world's largest neobanks with no physical branches, fully digital-first

- Provided L2 technical support for high-load investment services (web and mobile apps) serving a large active user base
- Triageed and resolved technical issues: connectivity, configuration, authentication, sync, and transaction errors — maintained high resolution SLA and customer satisfaction metrics
- Collected logs, reproduced bugs, documented reproduction steps, and authored detailed bug reports for development teams
- Escalated critical incidents to L3 and development teams with thorough diagnostic summaries, facilitating rapid resolution
- Contributed to internal knowledge base and support documentation, reducing repeat tickets and improving team efficiency
- Collaborated with frontend and backend developers to troubleshoot complex technical cases across the full stack

PROJECTS

Support AI Agent Platform

Stack: Python, FastAPI, LangChain, LangGraph, PostgreSQL, Docker, GitLab CI, N8N

No-code AI agent builder enabling non-technical support staff to create custom agents for any ticket type. Listens to Service Desk webhooks, auto-selects prompts from a dynamic catalog, enriches context from Confluence documentation, vector knowledge bases, and Graylog logs, then delivers structured resolution results. Handles **2000+ tasks/day**. **Winner of "Best IT Projects of 2025"** internal company award.

Automated Ticket Resolution System

Stack: Python, LangChain, RAG, Vector DB, Graylog, FastAPI, N8N

RAG-based auto-resolution system for support tickets. Parses ticket descriptions, logs, and screenshots; searches vectorized knowledge base for relevant documentation and API methods; queries Graylog logs for error patterns; identifies root cause and auto-publishes validated solutions. **Auto-resolves ~15% of tickets** — saves an estimated **200+ hours/month** of engineering time.

Service Desk Monitoring & Reporting

Stack: Python, PostgreSQL, LLM, N8N

Real-time support metrics aggregation with daily, weekly, and monthly CSV exports and data visualizations. Auto-delivers reports via corporate messenger and email. LLM-driven analysis of ticket trends with actionable improvement recommendations for support team leads.

CERTIFICATES

- **n8n Course** — Level 1 | [Certificate](#) | December 2025
- **n8n Course** — Level 2 | [Certificate](#) | December 2025
- **Back End Development and APIs** — freeCodeCamp | [Certificate](#) | July 2023
- **JavaScript Algorithms and Data Structures** — freeCodeCamp | [Certificate](#) | February 2023

EDUCATION

Specialist, Marketing — Russian State Social University (2012)

Self-taught developer — transitioned from marketing analytics to software engineering through hands-on learning and certifications.
